### **REASONS FOR ALLOWANCE**

The instant invention is deemed to be directed to an unobvious improvement over the invention published by Ichimura (WO 02/057662). The improvement comprises a motor overspeed inhibiting device that inhibits rotation of the traveling motor, if the overspeed detection device detects an overspeed state in the traveling motor and a command value issued from the target rotation speed command device is equal to or greater than a predetermined value until a braking pressure is generated through a switchover at the counterbalance valve and the traveling motor is no longer in the overspeed state for the purposes of extending the service life of the motor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **PRIOR ART**

The publication to Ichimura is cited for the showing of a travel control device similar to applicant's but lacking the inhibiting of rotation in an overspeed state while a command valve is equal to or greater than a predetermined value.
